Single Limb Anesthesia Circuits

Uni-Lim™ and Pedi-Lim™ Single Limb Anesthesia Circuits

LATEX FREE | SINGLE PATIENT SINGLE USE

The Uni-Lim™ and Pedi-Lim™ Single Limb Coaxial Anesthesia Circuit features a tube-within-a-tube design that works to eliminate twisting between the inspiratory and expiratory limb. It provides natural heat and moisture conservation properties.

- Configurations available with face masks, filters, heat moisture exchangers with filters (HMEFs), and gas sampling lines

LIMB-O® Single Limb Circuits

LATEX FREE

The LIMB-O® Single Limb Circuit is divided by a flexible septum. It effectively transfers heat from the expiratory to the inspiratory side of the circuit.

- Increased thermal efficiency rates during surgery keeps gases warm
- Less weight means less torque on the ETT and less plastic waste
- LIMB-O circuit services patients from pediatric to adult
- Configurations available with face masks, filters, heat moisture exchangers with filters (HMEFs), and gas sampling lines
