

AIRLIFE® MULTI-LINK® X2 ECG SYSTEM

ECG Guide for CHS Facilities

A Partnership for Simplified ECG Monitoring

CHS and AirLife® have entered into a strategic partnership to create a formulary for bedside and telemetry ECG monitoring. As the original OEM manufacturer of GE HealthCare™ clinical accessories, AirLife has leveraged its deep expertise to deliver universal compatibility across other leading brands, including Philips®, Mindray®, Dräger®, Spacelabs®, Nihon Kohden®, Physio-Control®, and Zoll®.

A Single Source of Truth

The AirLife Multi-Link® X2 ECG System is designed as a single-source solution for healthcare facilities—combining value, quality, and reliability without compromise. With universally compatible trunk cables, clinicians can use the same leadwires across their facility, regardless of the monitoring platform in each care area.

Your Guide to What's Available

This CHS ECG Formulary Guide is your one-stop resource for identifying the exact solutions your facility requires. The Multi-Link X2 portfolio offers a wide range of lengths, connection styles (grabbers or snaps), and lead setups in both reusable and disposable formats. Facilities that are still in transition toward single-patient-use can confidently use disposable leadwires in high-risk areas while continuing to rely on reusable sets throughout the rest of the facility—all without compatibility concerns.

Whole-House Disposable Leadwires

Utilizing a disposable leadwire system throughout your entire healthcare facility can help you reduce the possibility of cross-contamination from the reuse of ECG leadwires. Our versatile single-patient-use leadwires remain with the patient throughout their stay, even when transferred between departments with different monitoring solution brands.

Bedside Monitoring

In bedside monitoring we offer a 12-foot reusable ECG cable and 39-inch or shorter disposable leadwires. This configuration features the same length cables and leads in a typical reusable set up.

**Dräger compatibility utilizes a reusable adapter with Dräger Multi-Med cables*

Telemetry Monitoring

If a patient is transferred to a telemetry unit, their 29-inch leadwire can be plugged directly into most GE HealthCare telemetry devices. We also offer reusable adapters compatible with many other telemetry devices.

Remember... the Gray Stays and the Green Goes!

Bedside Monitoring

The **green** leadwires are disposable and travel with the patient. Remember to disconnect the leadwires from the **gray** cable when transferring the patient. The gray ECG cables are reusable and dedicated to the room. They should remain attached to the monitor.

Reusable ECG Cable

Disposable Leadwire

Telemetry Monitoring

In a telemetry environment the **gray** adapter stays with the telemetry transmitter and the **green** leadwire travels with the patient.

Telemetry Adapters

Disposable Leadwire

With the Multi-Link X2 ECG System it is easy to identify which products stay with the monitor and which travel with the patient. All gray cables, adapters, and leadwires are reusable and should remain attached to the monitor or telemetry transmitter. Whereas green indicates a disposable product, which should travel with the patient.

AirLife has created two training videos highlighting how to:

1. Set up a new patient with a disp. leadwire:

2. Transfer a patient utilizing disp. leadwires:

Partial-House Disposable Leadwires

Unlike many other universal ECG systems, the Multi-Link X2 ECG System was designed with flexibility in mind, allowing healthcare facilities to use both reusable and disposable leadwires in different departments throughout their system. This helps healthcare facilities focus on single-patient-use leadwire solutions for the departments that need it most, while gaining support for a whole-house disposable solution in the future.

Reusable Leadwires in Bedside

Disposable Leadwires in Bedside

By utilizing 12' reusable Multi-Link X2 ECG trunk cables throughout your healthcare facility, you can use disposable or reusable Multi-Link leadwires in every room. If a patient transfers from a department utilizing disposable leadwires, the leads can remain with them for the rest of their stay.

**Dräger compatibility utilizes a reusable adapter with Dräger Multi-Med cables*

Reusable Leadwires in Telemetry

Multi-Link reusable leadwires will plug directly into most GE HealthCare telemetry devices. We also offer several reusable adapters compatible with other telemetry brands.

Disposable Leadwires in Telemetry

Disposable leadwires will plug directly into most GE HealthCare telemetry devices. We also offer several reusable adapters compatible with other telemetry brands.

Whole-House Reusable Leadwires

The Multi-Link X2 ECG system is designed to also function fully independent of disposable leadwires. Our reusable platform is perfect for healthcare facilities that need a single-source supplier of ECG capital accessories without sacrificing value, quality or reliability. Plus, we offer an industry-best “Double-Life” warranty for all of our ECG capital accessories. After converting to reusable leadwires with the Multi-Link X2 ECG system, healthcare facilities are set to convert to disposable leadwires when ready.

Bedside Reusable Leadwires

The traditional configuration utilizes a 12' ECG cable and 51" or shorter leadwire.

**Dräger compatibility utilizes a reusable adapter with Dräger Multi-Med cables*

Telemetry Reusable Leadwires

In the telemetry unit, 29" Multi-Link reusable leadwires can be plugged directly into most GE HealthCare telemetry devices. We also offer reusable adapters compatible with many other telemetry devices.

Multi-Link® X2 Trunk Cables Have Easy-to-Read Laser Printing

This includes the reorder number, lot number and, in some instances, lead configurations. The lot number is in a MMYYYY format to easily discern the age of your trunk cables.

Our reusable and disposable Multi-Link leadwires are stamped with the manufacturing date.
